EMPATHY MAP CANVAS

Implement Client Script & UI Policy (Incident)

Target User: ServiceNow Incident Creator / IT Support Staff

■ *THINK & FEEL*

• Wants to create an Incident correctly.
• May be unsure which fields are required under different conditions.
• Wants the form to guide them and reduce mistakes.
• Wants confidence that the Incident meets business rules.

■ *SEE*

• ServiceNow Incident form with multiple fields.
• Impact, urgency, assignment and other Incident information.
• Different requirements depending on Incident conditions.
• Manual data-entry and validation processes.

■ *HEAR*

• Support teams ask for complete Incident information.
• Users receive instructions about required fields.
• Teams emphasize accurate data for routing and resolution.
• Feedback may highlight missing or incorrect information.

■ *SAY & DO*

• Enter Incident details.
• Select impact and urgency.
• Enter or select assignment information.
• Submit or update the Incident.
• Correct information when validation identifies an issue.

■ *PAINS*

• Incomplete Incident records.
• Incorrect or inconsistent data entry.
• Uncertainty about which fields are mandatory.
• Repeated manual corrections.
• Poor data can affect routing, reporting and SLA compliance.

■ *GAINS*

• Clear and consistent field requirements.
• Automatic field behavior based on conditions.
• Accurate and complete Incident records.
• Validation before submission.
• Better data quality and consistency.
• More efficient Incident management.

KEY USER NEED: A guided Incident form that automatically enforces the right field behavior and validates information before submission.

Project Skills: Incident Management • UI Policy • UI Policy Actions • Client Scripts • Form Validation
