Problem - Solution Fit

Implement Client Script & UI Policy (Incident) | ServiceNow Incident Management

Incident Management | UI Policy | UI Policy Actions | Client Scripts | Form Validation

1 Customer Segment

- **Service desk agents / callers** who log Incidents daily
- **Resolver groups** who receive and work the tickets
- **Support managers & ServiceNow admins** accountable for SLA, reporting and data quality
- Organisations running ServiceNow ITSM that want consistent Incident data

2 Problem

- Incidents are saved with **incomplete, inconsistent or incorrect** data
- Data entry relies on **user awareness and manual checks**
- Weak triage and routing; slower resolution
- Inaccurate reporting and **missed SLA compliance**
- Lower overall service quality

3 Root Causes

- No enforcement of rules at the form (UI) level
- Fields shown or optional regardless of context (e.g. state, priority)
- No save-time validation to stop bad records being submitted
- No auto-population of values that can be derived
- Rules differ between users and teams

4 Existing Alternatives

- Training and reminders for agents
- Manual review and clean-up of records after submission
- Back-end Business Rules only (feedback arrives after the user has moved on)
- Spreadsheets / reports to chase missing data

5 Proposed Solution

- **UI Policies** to control field visibility, read-only and mandatory status by condition
- **UI Policy Actions** to apply the per-field behaviour
- **Client Scripts** (onChange, onLoad, onSubmit) to auto-populate values and run save-time validation
- Block submission with a clear message when required conditions are not met

6 Problem-Solution Fit

- Rules are enforced **at entry**, so errors are prevented, not corrected
- Mandatory and conditional fields give complete data for triage and routing
- Consistent behaviour for every user and team
- Cleaner data supports accurate reporting and SLA compliance

EXPECTED OUTCOMES

Complete
Incident records at submission

Consistent
data across the platform

Fewer
re-assignments and rework

Better
SLA and reporting accuracy
