Project Development Phase

Model Performance Test

Date	03 October 2026
Team ID	PNT2022TMIDxxxxxx
Project Name	Implement Client Script & UI Policy (Incident) - ServiceNow
Maximum Marks	

Model Performance Testing

The project team fills in the following information in the model performance testing template.

S.No.	Parameter	Values	Screenshot
1.	Model Summary	ServiceNow automation setup for data integrity on Incident records using UI Policies, UI Policy Actions and Client Scripts: mandatory fields, auto-populated values, field visibility/read-only behaviour, and blocking form submission when conditions are not met. **Note:** If the entered data satisfies the configured conditions, the Incident record is saved; otherwise the form shows an error message and the submission is blocked.	[Attach screenshot]
2.	Accuracy	Training Accuracy - ____ % Validation Accuracy - ____ % *(Test cases passed / total test cases executed on the Incident form.)*	[Attach screenshot]
3.	Confidence Score (Only Yolo Projects)	Not applicable - this project does not use an object-detection (YOLO) model, so no confidence score is generated.	[Attach screenshot]

Test Scenarios (Incident Form)

#	Scenario	Expected Result	Result
1	Save Incident with Short description empty	UI Policy makes field mandatory; save blocked with message	
2	Select a Category / Impact / Urgency	Dependent fields auto-populate or show as configured	
3	Change State to Resolved / Closed	Resolution fields become mandatory / visible	
4	Client Script onSubmit with invalid condition	Alert shown and submission aborted	
5	Submit with all valid data	Incident record created successfully
